AvarSYS Offers Complimentary Infrastructure Evaluations to Local Businesses

ATLANTA, GA – 15 November 2008: Most servers are only 10% - 15% utilized. AvarSYS is offering complimentary infrastructure evaluations to local businesses. With an infrastructure performance assessment, monitoring software is installed, without network agents, to evaluate server stress and efficiency. After the assessment is complete, an engineer will analyze the results and formulate a solution. Once the results are analyzed, recommendations are made on how best to improve the infrastructure. Companies can choose which improvements to make and are under no obligation.

The employees at AvarSYS work closely with clients to develop an IT roadmap that is designed to ensure that each project implements contributes to the client's success. With AvarSYS' infrastructure performance assessment, an organization will have a reliable, affordable starting point from which to increase performance, speed and save energy – ultimately improving operational efficiencies and better supporting business objectives.

About AvarSYS, Inc.

Avarsys, Inc. is a technology solutions provider specialized in advanced visualization and high performance computing systems. Avarsys provides cluster computing and enterprise infrastructure solutions designed to reduce complexity, improve utilization, and simplify administration.
